CONTENTS

Because parts marked with " ⚠ " is indispensable for the machine safety maintenance and operation, it must be replaced with the parts specific to the product specification.

1 Power supply PWB unit(RDENT2097XHZB)

SHARP

SHARP SERVICE MANUAL

FACSIMILE

MODEL **UX-177**

CONTENTS

Parts marked with "⚠" is important for maintaining the safety of the set. Be sure to replace these parts with specified ones for maintaining the safety and performance of the set.

SHARP CORPORATION

CAUTION FOR BATTERY REPLACEMENT

(Danish)   ADVARSEL !
Lithiumbatteri-Eksplosionsfare ved fejlagtig håndtering.
Udskiftning må kun ske med batteri af samme fabrikat og type.
Levér det brugte batteri tilbage til leverandoren.

(English)   Caution !
Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type
recommended by the equipment manufacturer.
Discard used batteries according to manufacturer's
instructions.

(Finnish)   VAROITUS
Paristo voi räjähtää, jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan
tyyppiin. Hävitä käytetty paristo valmistajan ohjeiden
mukaisesti.

(French)   ATTENTION
Il y a danger d'explosion s' il y a remplacement incorrect
de la batterie. Remplacer uniquement avec une batterie du
même type ou d'un type recommandé par le constructeur.
Mettre au rébut les batteries usagées conformément aux
instructions du fabricant.

(Swedish)   VARNING
Explosionsfare vid felaktigt batteribyte.
Använd samma batterityp eller en ekvivalent
typ som rekommenderas av apparattillverkaren.
Kassera använt batteri enligt fabrikantens
instruktion.

(German)   Achtung
Explosionsgefahr bei Verwendung inkorrekter Batterien.
Als Ersatzbatterien dürfen nur Batterien vom gleichen Typ oder
vom Hersteller empfohlene Batterien verwendet werden.
Entsorgung der gebrauchten Batterien nur nach den vom
Hersteller angegebenen Anweisungen.

CHAPTER 1. GENERAL DESCRIPTION

[1] Specifications

Applicable telephone line: Public switched telephone network

Compatibility: ITU-T (CCITT) G3 mode

Configuration: Half-duplex, desktop transceiver

Compression scheme: Modified Huffman and Sharp special mode

Scanning method: Flat-bed, solid-state CCD

Resolution:
Horizontal:
  8 dot/mm
Vertical:
  Standard
  Fine/Halftone–7.7 lines/mm
  Super fine–15.4 lines/mm

Recording system: Thermal recording

Display: 7 x 5 dots, 1 line by 16-digit display

Reception modes: FAX/TEL/TEL-FAX/A.M.

Modem speed: 9600 bps with automatic fallback to 7200, 4800, or 2400 bps

Transmission time* : Approx. 15 seconds (Sharp special mode)

Effective recording width: 210 mm, max.

Input document size:
Automatic feeding:
  Width — 148 to 216 mm
  Length — 128 to 297 mm
Manual feeding:
  Width — 148 to 216 mm
  Length — 128 to 1000 mm

Effective scanning width: 210 mm

Automatic document feeder: 20 sheets max.

Halftone (gray scale): 64 levels

Contrast control: Automatic/Dark selectable

Copy function: Standard

Telephone function: Standard (cannot be used if power fails)

Noise emission: Less than 70 dBA (Measured according to DIN 45635.)

Power requirements: 230 V AC, 50 Hz

Operating temperature: 5 to 35°C

Power consumption: Stand-by: 8 W

Maximum: 120 W

Dimensions: Width: 341 mm

Depth: 257 mm

Height: 123 mm

Weight: 2.9kg

* Based on ITU-T (CCITT) Test Chart #1 at standard resolution in Sharp special mode, excluding time for protocol signals (i.e., ITU-T phase C time only).

[2] Operation Panel

FUNCTION key
Press this key to select various special functions.

RESOLUTION key
Press this key to adjust the resolution and contrast before sending or copying a document.

Display
This displays various messages during operation and programming.

RECEPTION MODE key
Press this key to select the mode of reception.

VOLUME key
Press these keys to adjust the volume of the speaker when the **SPEAKER** key has been pressed, or the volume of the ringer at all other times.

SPEED DIAL key
Press this key to dial a 2-digit. Speed Dial number.

REDIAL key
Press this key to automatically redial the last number dialed.

STOP key
Press this key to stop operations before they are completed.

Number keys
Use these keys to dial numbers, and enter numbers and letters during number/name storing procedures.

Rapid keys
Use these keys to dial fax and voice numbers automatically. Rapid key 01 (indicated by the blue logo) also serves as an access key when using the Mercury Service. (Note that you must attach the Rapid key labels.)

START key
Press this key to send or receive a document.

SEARCH/R key
Press this key to search for an automatic dialing number, or, if you are on a P.b.x. exension, press this key to transfer or put the other party on hold.

SPEAKER key
Press this key to dial a number without picking up the handset.

COPY/HELP key
When a document is in the feeder, press this key to make a copy. At any other time, press this key to print out the help list, a quick reference guide to the operation fo your.

[3] Transmittable Documents

1. Document Sizes

Normal size	width	148 – 216 mm
	length	128 – 297 mm
✕✕ Use document carrier sheet for smaller documents.

* With special sizes, only one sheet can be fed into the machine at a time. Insert next page into feeder as current page is being scanned.

2. Paper Thickness & Weight

Normal size	ADF 10 sheets	Thickness	0.06–0.12 mm
		Weight	52–104 g/m^2
	ADF 20 sheets	Thickness	0.06–0.09 mm
		Weight	52–74.3 g/m^2
Special size		Thickness	0.12–0.20 mm
		Weight	52–157 g/m^2

3. Document Types

- Normal paper

  Documents handwritten in pencil (No. 2 lead or softer), fountain pen, ball-point pen, or felt-tipped pen can be transmitted.
  Documents of normal contrast duplicated by a copying machine can also be transmitted.

- Diazo copy (blue print)

  Diazo copy documents of a normal contrast may be transmitted.

- Carbon copy

  A carbon copy may be transmitted if its contrast is normal.

4. Cautions on Transmitting Documents

- Documents written in yellow, greenish yellow, or light blue ink cannot be transmitted.
- Ink, glue, and correcting fluid on documents must be dry before the documents can be transmitted.
- All clips, staples and pins must be removed from documents before transmission.
- Patched (taped) documents should be copied first on a copier and then the copies used for transmission.
- All documents should be fanned before insertion into the feeder to prevent possible double feeds.

5. Automatic Document Feeder Capacity

Number of pages that can be placed into the feeder at anytime is as follows:

Normal size: max. ADF 20 sheets

Special size: single sheet only (manual feed)

NOTES:
- When you need to send or copy more pages than the feeder limit, place additional pages in feeder when last page in feeder is being scanned.
- Place additional pages carefully and gently in feeder.

 If force is used, double-feeding or a document jam may result.

6. Readable Width & Length

The readable width and length of a document are slightly smaller than the actual document size.

Note that characters or graphics outside the effective document scanning range will not be read.
- **Readable width**

210 mm, max.

Readable width

- **Readable length**

This is the length of the document sent minus 4 mm from the top and bottom edges.

7. Use of Document Carrier Sheet

A document carrier sheet must be used for the following documents.

- Those with tears.
- Those smaller than size 148 mm (W) x 128 mm (L).
- Carbon-backed documents

Make print straight across paper
E.G.
Place the document carrier in the document feeder with the clear film side down

Direction of insertion

NOTE: To transmit a carbon-backed document, insert a white sheet of paper between the carbon back of the document and the document carrier.

- Those containing an easily separable writing substance (e.g., tracing paper written on with a soft, heavy lead pencil).

NOTES:
- When using the document carrier, carefully read the instructions written on the back.
- If the document carrier is dirty, clean it with a soft, moist cloth, and then dry it before using for transmission.
- Do not place more than one document in the carrier at a time.

[4] Installation

1. Site selection

Take the following points into consideration when selecting a site for this model.

ENVIRONMENT

- The machine must be installed on a level surface.
- Keep the machine away from air conditioners, heaters, direct sunlight, and dust.
- Provide easy access to the front, back, and sides of the machine.

  In particular, keep the area in front of the machine clear, or the original document may jam as it comes out after scanning.

- The temperature should be between 5° and 35°C.
- The humidity should be between 30% and 85% (without condensation).

ELECTRICITY

230V, 50Hz, grounded (3-prong) AC outlet is required.

Caution!

- Connection to a power source other than that specified will cause damage to the equipment and is not covered under the warranty.
- If your area experiences a high incidence of lightning or power surges, we recommend that you install a surge protector for the power and telephone lines. Surge protectors can be purchased at most telephone specialty stores.

If the machine is moved from a cold to a warm place...

If the machine is moved from a cold to a warm place, it is possible that the reading glass may fog up, preventing proper scanning of documents for transmission. To remove the fog, turn on the power and wait approximately 2 hours before using the machine.

TELEPHONE JACK

A standard RJ-11C telephone jack must be located near the machine. This is the telephone jack commonly used in most homes and offices.

- Plugging the fax machine into a jack which is not an RJ-11C jack may result in damage to the machine or your telephone system. If you do not know what kind of jack you have, or needed to have one installed, contact the telephone company.

2. Assembly and connections

① Connect the handset cord to the handset and the fax as shown.

- The ends of the handset cord are identical, so they will go into either socket.

Place the handset on the handset rest.
② Insert one end of the line cord into the socket on the back of the machine marked **TEL. LINE**. Insert the other end into a wall telephone socket.

- Be sure to plug the line cord into the **TEL. LINE** socket. **Do not** plug it into the **TEL. SET** socket. (Note: The **TEL. SET** socket is not available in some countries.)
③ Plug the power cord into a 230V, 50Hz, grounded (3-prong) AC outlet.

- **Caution:** The mains outlet (socket-outlet) shall be installed near the equipment and shall be easily accessible.

- The fax does not have a power on/off switch, so the power is turned on and off by simply plugging in or unplugging the power cord.
④ Attach the received document support by inserting the ends into the holes in the fax as shown below.
4. Loading the recording paper

① Grasp the finger hold on the right side of the paper compartment cover, and pull up to open the cover.
Remove the packing paper from the paper compartment.

- **Caution!** If you are replacing the paper, do not touch the metal strip in the compartment. It may be hot if a document has just been printed.
② Unwrap the roll of fax paper and insert it in the compartment.

- Make sure the hubs on each side of the compartment fit into the ends of the roll. The hub on the left side is mounted on a spring to allow for insertion.

- **Important:** The roll must be placed so that the leading edge of the paper feeds from over the top of the roll. (The paper is only coated on one side for printing. If the roll is placed upside down, the paper will come out blank after printing.)
YES   **NO**

Note: The paper roll provided is only a sample roll which is approximately 50 m long.

THERMAL PAPER: FO-40PRw

③ Pass the leading edge of the paper over the roller and through the outlet in the paper compartment cover. Remove any slack.
④ Close the cover and then press the START key. A short length of the fax paper will feed out. Grasp the paper by the edge and pull upward to tear it off.

START
[5] Quick reference guide

Use this guide as a convenient reminder for operating the machine after you have read the detailed instructions for each procedure in the manual.

Note:

- Steps which are optional are enclosed in a dotted frame:

Transmitting documents

Normal Dialing	Load document → [RESOLUTION] → Lift handset or press **SPEAKER** → Dial (press numeric keys) → Wait for reception tone → press **SPEAKER** [START] → Hang up
Direct Keypad Dialing	Load document → [RESOLUTION] → Dial (press numeric keys) → [START]
Rapid Key Dialing	Load document → [RESOLUTION] → Press Rapid Key key
Speed Dialing	Load document → [RESOLUTION] → SPEED DIAL → Enter Speed Dial number (press 2 numeric keys) → [START]
Redialing	Load document → [RESOLUTION] → REDIAL → Wait for reception tone → [START]

Making voice calls

| Normal Dialing	Lift handset or press **SPEAKER** → Dial (press numeric keys) → Lift handset if you pressed **SPEAKER**
Rapid Key Dialling	Lift handset or press **SPEAKER** → Press Rapid Key key → Lift handset if you pressed **SPEAKER**
Speed Dialing	Lift handset or press **SPEAKER** → SPEED DIAL → Enter Speed Dial number (press 2 numeric keys) → Lift handset if you press **SPEAKER**
Redialing	REDIAL → Lift handset

FUNCTION key menu

The following chart shows the layout of the functions and settings accessed by pressing the **FUNCTION** key. First press the **FUNCTION** key, the appropriate numeric key as shown, and then "#" or " ✳ " until the desired item appears.

Instructions for making each setting appear in the display. If you have any difficulty, refer to the detailed instructions on the page shown below the setting.

Printing out lists	FUNCTION ○ → 2 → # or ✳ (Press until desired item appears)
Entering your name and FAX number	FUNCTION ○ → 3 → #
Setting the date and time	FUNCTION ○ → 3 → ✳ → ✳
Storing Numbers For Automatic Dialing	FUNCTION ○ → 3 → # → 1 or 2
Setting User Switches	FUNCTION ○ → 4 → # or ✳ (Press until desired item appears)

Letters and numbers
To enter a letter or number, press the appropriate key repeatedly until the desired number/letter appears in the display (the number appears first, then the letters in the order shown abovethe key).

Space
Press this key twice to enter a space.

Symbols
Press either key repeatedly untill the desired symbol appears (see the symbol list below) .

Delete
Press this key to delete the letter highlighted by the cursor (if the cursor is to the right of the last letter entered, it will backspace and delete the last letter).

Shift
Press this key once to change case (press it again to change back).

Cursor left
Press this key to move the cursor to the left.

Cursor right
Press this key to move the cursor to the right.

Keypad:
SPEED DIAL
DELETE/REDIAL
SHIFT SEARCH/R
SPEAKER

SPACE 1 GHI | ABC 2 | DEF 3
4 | JKL 5 | MNO 6
PQRS 7 | TUV 8 | WXYZ 9
✳ | SYMBOLS 0 | #

CHAPTER 2. ADJUSTMENTS

[1] Adjustments

General

Since the following adjustments and settings are provided for this model, make adjustments and/or setup as necessary.

1. Adjustments

Adjustments of output voltage (FACTORY ONLY)

1. Install the power supply unit in the machine.

2. Set the recording paper and document.

3. When the document is loaded, power is supplied to the output lines. Confirm that outputs are within the limits below.

Output voltage settings
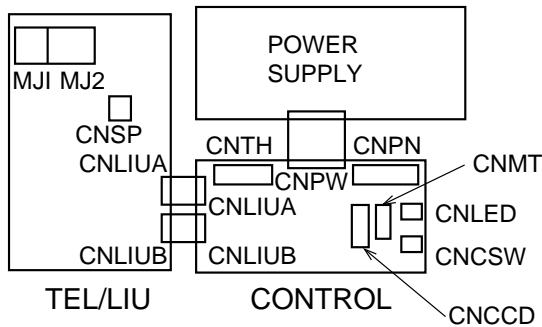

Output	Voltage limits
+5V	4.75V ~ 5.25V
+24V	23.3V ~ 24.7V

Connector No. / Pin No.	CNPW
1	DG
2	DG
3	+5V
4	VTH-ON
5	MG
6	MG
7	+24V
8	VTH
9	VTH

2. IC protectors replacement

ICPs (IC Protectors) are installed to protect the motor driver circuit and the plunger drive circuit. ICPs protect various ICs and electronic circuits from an overcurrent condition.

The location of ICPs are shown below:
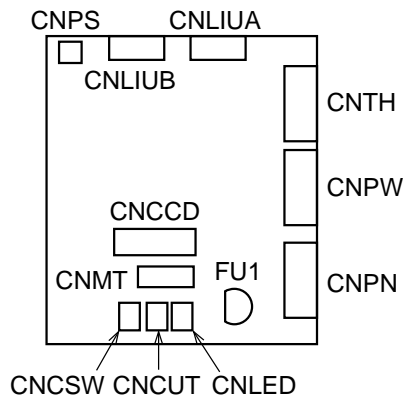

(1) FU1 (ICP-N20) is installed in order to protect IC's from an over-current generated in the motor drive circuit. If FU1 is open, replace it with a new one.

3. Settings

(1) Dial mode selector

DIAL mode (Soft Switch No. SWB4 DATA No. 3)

(step 1) Select "OPTION SETTING".

KEY : [FUNCTION] (4)

DISPLAY: [OPTION SETTING] ⟺ [PRESS✳ OR #]

(step 2) Select "DIAL MODE".

Cursor
When initially registering, the mode shows 1=TONE.
When registering again, the mode which was registered formerly is shown.

KEY: (#)(#)(#)(#)(#)(#)(#)

DISPLAY: [DIAL MODE] ⟺ [1=TONE, 2=PULSE]

(step 3) Select, using "1" or "2".

KEY: (1)

DISPLAY: [TONE SELECTED]

KEY: (2)

DISPLAY: [PULSE SELECTED]

(step 4) End, using the "STOP" key.

KEY: (⊽) **STOP**

[2] Diagnostics and service soft switch

1. Operating procedure

(1) Entering the diagnostic mode

Press FUNC → 9 → ✳ → 8 → # → 7 , and the following display will appear.

> FVL0✳ After 2 sec: DIAG MODE
>
> FVL0✳ Identical

Then press the START key. Select the desired item with the ✳ key or the # key or select with the rapid key. Enter the mode with the START key.

(Diag•specifications)
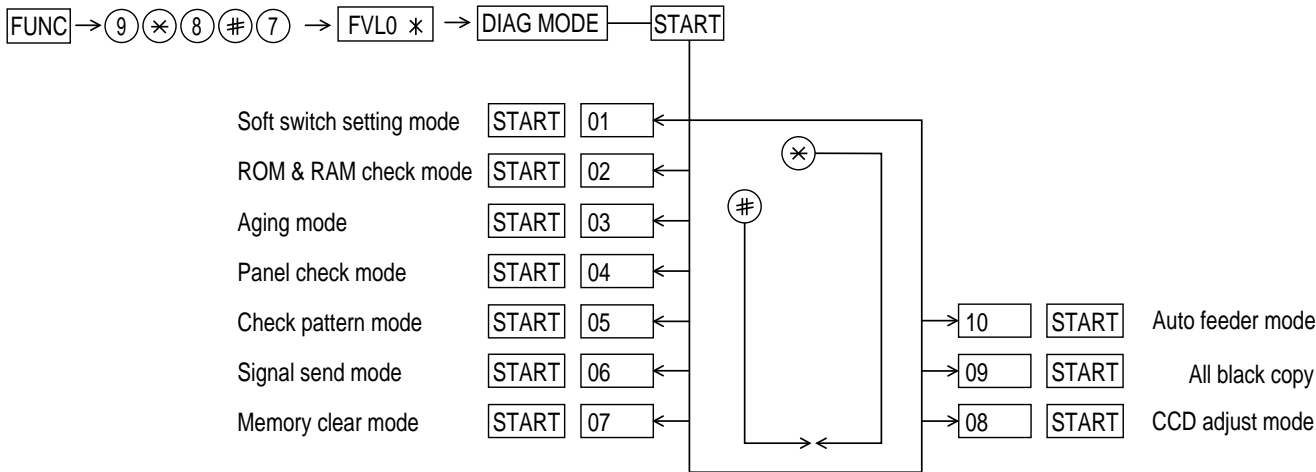

If the dial mode cannot be set, repeat the dial mode operation, performing the following operation.
After the power is turned on and "WAIT A MOMENT" is indicated, press the STOP key.

STOP KEY + "Power ON" + START KEY

↓

Memory clear
(Work + Backup)

"Power ON" keep the STOP key pressed while "WAIT A ...." is indicated.
Press the START key when "MEMORY CLEAR?" appears.
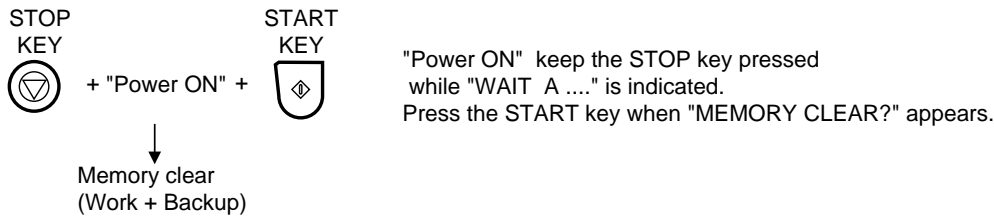

2. Diagnostic items

ITEM No.	RAPID key	Contents	Function
1	01	Soft switch setting mode	Display soft SW contents, and changes the setting.
2	02	ROM & RAM check mode	Checks program ROM (128KByte) and work RAM (32KByte).
3	03	Aging mode	Prints the check pattern at the speed of 1 sheet/5 minutes.
4	04	Panel check mode	Displays the name of key depressed on the operation panel.
5	05	Check pattern mode	Prints 2 sheets of check pattern.
6	06	Signal send mode	Sends modem signals sequentially.
7	07	Memory clear mode	Clears the backup memory contents to reset it to the initial state.
8	08	CCD adjust mode	Used for CCD adjustment. Executes copy operation. When the STOP key is pressed, the unit goes into the wait state. When the START key is pressed again, the unit starts operation again.
9	09	All black copy	Performs all-dot printing (2m). (Check thermal head operation)
10	10	Auto feeder mode	Feeds the original documents.

3. Diagnostic items description

3. 1. Soft switch setting mode

Used to change the soft switch settings.

The soft switch which is stored internally is set by using the keys.

The available soft switches are SW-A1 to SW-K1.

The content of soft switches is shown in page 2-5 to 2-13.

The contents are set to factory default settings.

3. 2. ROM & RAM check mode

ROM executes the sum check, and RAM executes the matching test. The result will be notified with the number of short sounds of the buzzer as well as by printing the ROM & RAM check list.

Number of short sounds of buzzer   0 → No error

                   1 → ROM error

                   2 → RAM error (32Kbyte)

3. 3. Aging mode

If any document is first present, copying will be executed sheet by sheet. If no document is present, the check pattern will be printed sheet by sheet. This operation will be executed at a rate of one sheet per 5 minutes, and will be ended at a total of 10 sheets.

3. 4. Panel check mode

In this mode, whether each key operates properly or not is checked. Press a key on the operation panel, and the corresponding key will be displayed. In this mode, press the STOP key, and the list of the keys pressed in this mode will be printed with the mode ended.

Whether all keys are pressed in this mode or not will be judged when the list is printed, and the result will be printed.

3. 5. Check pattern mode

This mode is used to check the status of print head. Two sheets of check pattern are printed. The following information of check pattern is printed.

   ① Vertical stripes (alternate white and black lines) Approx. 35 mm

   ② Full black   Approx. 70 mm

   ③ Full white   Approx. 35 mm

3. 6. Signal send mode

This mode is used to send various signals to the line.

FAX signals are sent in the level set by the soft switch.

   [1]   No signal (CML signal turned on)

   [2]   9600bps

   [3]   7200bps

   [4]   4800bps

   [5]   2400bps

   [6]   300bps (FLAG)

   [7]   2100Hz (CED)

   [8]   1100Hz (CNG)

   [9]   END

The signal can be checked by plugging the handset into the TEL line connector on the rear of the machine.

3. 7. Memory clear mode

This mode is used to clear the backup memory and reset to the default settings.

3. 8. CCD adjust mode

This mode is used to adjust the optical system. Since the copy is function performed, set the original. To abort the copy operation, press the STOP key. To restart press the START key. When the copy is completed or when the STOP key is pressed in the interruption state, exit from this mode occurs.

3. 9. All back copy

This mode is used to check the print head.

All-dot print is executed unconditionally until 2(m) is obtained except when any trouble occurs (recording paper has run out, recording paper jam, thermal protect).

3. 10. Auto feeder mode

In this mode, a document is inserted and discharged to check the auto feed function.

After this mode is started, set a document, and the document feed will be automatically tested.

4. How to make soft switch setting

To enter the soft switch mode, make the following key entries in sequence.

Press [FUNCTION] [9] [∗] [8] [#] [7] [START]   [START]

⇩

DATA No.   1 2 3 4 5 6 7 8

S F T SW-A1 = 0 0 0 0 0 0 0 0   Press [FUNCTION] key.

S F T SW-A1 = 1 0 0 0 0 0 0 0   Press [#] key.

S F T SW-A1 = 1 0 0 0 0 0 0 0   Press [∗] key.

S F T SW-A1 = 1 0 0 0 0 0 0 0   Bit1 - 8 are set.

S F T SW-A1 = 1 0 0 0 0 0 0 0

                                            Press [START] key during setting.

S F T SW-A2 = 0 0 0 0 0 0 0 0

                                            Soft SW-A2 - SW-L2 are set.

S F T SW-L2 = 0 0 0 0 0 0 0 0

- To finish the settings halfway between SW-A1 and SW-L2, press the STOP key. In this case, the setting being done to the SW No. on display will be nullified while settings done to the preceding SW Nos. remain in effect.
- When the COPY key is pressed, the contents of soft switches are printed.

The soft switch mode is terminated.

5.Soft switch description

- **Soft switch**

SW NO.	DATA NO.	ITEM	Switch Setting and Function — 1	Switch Setting and Function — 0	Initial setting	Remarks

• **Soft switch function description**

SW-A1 No. 1 Protection from echo

Used to protect from echo in reception.

SW-A1 No. 2 Forced 4800 bps reception

When line conditions warrant that receptions take place at 4800 bps repeatedly.

It may improve the success of receptions by setting at 4800 bps.

This improve the receiving document quality and reduces handshake time due to fallback during training.

SW-A1 No. 3 Footer print

When set to "1", the date of reception, the sender machine No., and the page No. are automatically recorded at the end of reception.

SW-A1 No. 4 Maximum copy, transmit, receive page length

Used to set the maximum page length.

To avoid possible paper jam, the page length is normally limited to 1 meter for copy or transmit, and 1.5 meters for receive.

It is possible to set it to "No limit" to transmit a long document, such as a computer print form, etc. (In this case, the receiver must also be set to no limit.)

SW-A1 No. 5 CSI transmission

(CSI TRANSMISSION) is a switch to set whether the machine sends or does not send the signal (CSI signal) informing its own telephone No. to the remote fax, machine when information is received. When "nonsending" is set, the telephone No. is not output on the remote transmitting machine if the remote transmitting machine has the function to display or print the telephone No. of receiving machine, using this CSI signal.

SW-A1 No. 6 DIS receive acknowledgment during G3 transmission

Used to make a choice of whether reception of DIS (NSF) is acknowledged after receiving two DISs (NSFs) or receiving one DIS (two NSFs).

It may be useful for overseas communication to avoid an echo suppression problem, if set to 1.

SW-A1 No. 7 Non-modulated carrier detection for V29 modem

Though transmission of a non-modulated carrier is not required for transmission by the V29 modem according to the CCITT Recommendation, it may be permitted to a send non-modulated carrier before the image signal to avoid and echo suppression problem.

It may be useful for overseas communication to avoid an echo suppression problem, if set to 1.

SW-A1 No. 8 EOL (End Of Line) detect timer

Used to make a choice of whether to use the 25-second or 13-second timer for detection of EOL.

This is effective to override communication failures with some facsimile models that have longer EOL detection.

SW-A2 No. 1 ~ No. 4 Modem speed

Used to set determine the initial modem speed. The default is 9600 bps.

It may be necessary to program it to a slower speed when frequent line fallback is encountered, in order to save the time required for fallback procedure.

SW-A2 No. 5 Sender's information transmit

(SENDER'S INFORMATION TRANSMISSION) is a switch to set the function to print the content of HEADER PRINT described in the passcode list at the front end of receiver's original when original is sent to the remote machine.

If this switch is set to "NO", the HEADER PRINT is not output at the receiving machine.

SW-A2 No. 6 H2 mode (SHARP special mode)

Used to determine reception of H2 mode (15 sec transmission mode).

When set to OFF, H2 mode reception is inhibited even though the transmitting machine has H2 mode function.

SW-A2 No. 7 Communication error treatment (reception) in RTN sending

Used to determine communication error treatment when RTN is sent by occurrence of a received image error in G3 reception. When it is set to "1", communication error is judged as no error.

SW-A2 No. 8 CNG transmission

When set to "0", this model allows CNG transmission by pressing the Start key in the key pad dialing mode. When set to "1", CNG transmission in the key pad dialing mode cannot be performed. In either case, CNG transmission can be performed in the auto dial mode.

SW-A3 No. 1, No. 2 CED tone-signal interval

For international communication, the 2100Hz CED tone may act as an echo suppression switch, causing a communication problem.

Though SW-A3 No. 1 and No. 2 are normally set to 0, it should be changed this timer between the CED tone signal to eliminate the communication problem caused by echo.
SW-A3 No. 3 ~ No. 8 Reserved

Set to "0".

SW-A4 No. 1 ~ No. 5 Signal transmission level

Used to control the signal transmission level in the range of-0dB to -31dB.

The factory setting is at -8dB (MODEM output).

SW-A4 No. 6 Protocol monitor (Error print)

If set to "1", protocol is printed at communication error.

SW-A4 No. 7 Protocol monitor

Normally set to "0". If set to "1", communication can be checked, in case of troubles, without using a G3 tester or other tools.

When communication FSK data transmission or reception is made, the data is taken into the buffer. When communication is finished, the data analyzed and printed out. When data is received with the line monitor (SW4-No. 8) set to "1" the reception level is also printed out.

SW-A4 No. 8 Line monitor

Normally set to "0". If set to "1", the transmission speed and the reception level are displayed on the LCD. Used for line tests.

SW-A5 No. 1, No. 2 Digital equalization setting (Reception)

Line equalization when reception is to be set according to the line characteristics.

Setting should be made according to distance between the telephone and the telephone company central switching station.

SW-A5 No. 3 ~ No. 6 Reserved

Set to "0".

SW-A5 No. 7 Error criterion

Used to select error criterion for sending back RTN when receiving image data.

SW-A5 No. 8 Anti junk fax check

When use the Anti junk fax function, set to "1".

SW-A6 No. 1 Auto gain control (MODEM)

When this mode is enabled, If the reception signal level is under 31dBm. The modem itself controls the signal gain automatically.

SW-A6 No. 2 End buzzer

Setting this bit to 0 will disable the end buzzer (including the error buzzer/on-hook buzzer).

SW-A6 No. 3 Disconnect the line when DIS is received in RX mode

Bit1= 0: When DIS signal is received during RX mode, disconnect the line immediately.

Bit1= 1: When DIS signal is received during RX mode, wait the next signal.

SW-A6 No. 4 Equalization freeze control

This switch is used to perform reception operation by fixing the equalizer control of modem for the line which is always in unfavorable state and picture cannot be received.

* Usually, the control is executed according to the state of line where the equalizer setting is changed always.

SW-A6 No. 5 Equalization freeze 7200 bps only

Setting which specifies SW-A3 No. 6 control only in condition of 7200 bps modem speed.

SW-A6 No. 6 ~ No. 8 Reserved

Set to "0".

SW-B1 No. 1 ~ No. 4 Recall interval

Choice is made for a redial interval for speed and rapid dial calls. Used a binary number to program this. If set to "0" accidentally, 1 will be assumed.

SW-B1 No. 5 ~ No. 8 Recall times

Choice is made as to how many redials should be.

SW-B2 No. 1 ~ No. 8 Reserved

Set to "0".

SW-B3 No. 1, No. 2 PBX recall function (R key select)

Used to set the operation mode of PBX recall when the R key is pressed.

Setting is mode according to the type of PBX.

No. 1 = 1, No. 2 = 1: Time break recall (=Flash) is performed.
          The DPON on the LIU board is driven to initiate recall.
No. 1 = 1, No. 2 = 0: Earth recall is performed.
          The E-relay on the LIU board is driven to initiate recall.

SW-B3 No. 3 ~ No. 5 Reserved

Set to "0".

SW-B3 No. 6 Mercury line

0: No
1: Yes
Default: 0

SW-B3 No. 7 ~ No. 8 Reserved

Set to "0".

SW-B4 No. 1, No. 2 Reserved

Set to "0".

SW-B4 No. 3 Dial mode

When using the pulse dial, set to "0". When using the tone dial, set to "1".

SW-B4 No. 4 ✳ key Pulse dial → Tone dial

When setting to 1, the mode is changed by pressing the ✳ key from the pulse dial mode to the tone dial mode.

SW-B4 No. 5 ~ No. 8 Reserved

Set to "0".

SW-B5 No. 1 ~ No. 5 DTMF signal transmission level of lower frequency

The transmission level of DTMF signal is adjusted. (lower frequency)

00000: 0 dBm

↓

11111: -15.5 dBm   (-0.5 dBm x 31)

SW-B5 No. 6 ~ No. 8 Reserved

Set to "0".

SW-B6 No. 1 ~ No. 5 DTMF signal transmission level of higher frequency

The transmission level of DTMF signal is adjusted. (higher frequency)

00000: 0 dBm

↓

11111: -15.5 dBm   (-0.5 dBm x 31)

SW-B6 No. 6 ~ No. 8 Reserved

Set to "0".

SW-C1 No. 1, No. 2 Reading slice (binary)

Used to determine the set value of reading density in standard/fine mode. The standard setting is "00" (Factory setting is "00")

SW-C1 No. 3, No. 4 Reading slice (half tone)

Used to determine the set value of reading density in half tone mode. The standard setting is "00" (Factory setting is "00")

SW-C1 No. 5 Line density selection

Used to set the transmission mode which is automatically selected when the Resolution key is not pressed. In the copy mode, however, the fine mode is automatically selected unless the Resolution key is manually set to another mode.

SW-C1 No. 6 ~ No. 8 Reserved

Set to "0".

SW-D1 No. 1 ~ No. 4 Number of rings for auto answer mode

When the machine is set in the auto receive mode, the number of rings before answering can be selected. It may be set from one to four rings using a binary number. Since the facsimile telephone could be used as an ordinary telephone if the handset is taken off the hook, it should be programmed to the user's choice. If the soft switch was set to "1", direct connection is made to the facsimile.

If a facsimile calling beep was heard when the handset is taken off the hook, press the START key and put the handset on the hook to have the facsimile start receiving. If it was set to "0" accidentally, receive ring is set to "1".

NOTE: If the machine is set to answer after a large number of rings, it may not be able to receive faxes successfully.
If you have difficulty receiving faxes. reduce the number of rings to a maximum of 6.

SW-D1 No. 5 Automatic switching from manual to auto receive mode

This soft switch is used to select whether the machine should switch to the auto receive mode after 5 rings in the manual receive mode or remain in the same way as SW-D1 No. 1, No. 2, No. 3 and No. 4 "0"1"0"1" (5 rings (UK)) (3 rings (IR)).

SW-D1 No. 6, No. 7 Reserved

Set to "0".

SW-D1 No. 8 Ci detect frequency

Ring signal for auto reception is set.
When this switch is set to "0", PTT standards are set.

SW-D2 No. 1 ~ No. 8 Reserved

Set to "0".

SW-E1 No. 1 Automatic switching mode

Used to set auto TEL/FAX switching mode or to set the normal fax mode.

SW-E1 No. 2, No. 3 Pseudo ringing time at the phone/fax automatic switching mode

Choice is made as to how long to rumble the dummy ringer on TEL/FAX automatic switching mode.

SW-E1 No. 4 Number of CNG signal detection at the phone/fax automatic switching mode

Used for detection of CNG in one tone or two tones in the TEL/FAX automatic switching mode.

SW-E1 No. 5 CNG detect time at TEL/FAX mode

The switch which sets the time from the start of the CNG detection to the end in the TEL/FAX automatic switching mode.

SW-E1 No. 6 ~ No. 8 Reserved

Set to "0".

SW-E2 No. 1 ~ No. 4 Pseudo ringer sound output level to the line (For H, A, HK/CN, MY, TH)

Used to adjust the sound volume of pseudo ringer to the line (ring back tone) generated on selecting TEL/FAX. Setting is the reduce level from -5dBm output level.

(Example) If the reduce level is -5dBm, set by binary input "0""1""0""1" (5), then output level is -10dBm (-5dBm -5dBm)

If the reduce level is -8dBm, set by binary input "1""0""0""0" (8), then output level is -13dBm (-5dBm -8dBm)

SW-E2 No. 5 ~ No. 8 Reserved

Set to "0".

SW-F1 No. 1, No. 2 DTMF detect time

Used to set detect time of DTMF (Dual Tone Multi Frequency) used in remote reception (5 ⚹ ⚹).

The longer the detect time is, the less the error detection is caused by noises.

SW-F1 No. 3 Remote reception (5 ⚹ ⚹) detect

Used to set the function of remote reception (5 ⚹ ⚹). When set to "1", the remote reception function is disabled.

SW-F1 No. 4 Remote reception

(Corresponding to TEL made by GE) P.B.X.

"1": Compatible with TEL mode by GE

"0": Not compatible

- When sending (5 ⚹ ⚹) for remote reception with a GE manufactured telephone remote reception may not take place because of special specifications in their DTMF.
  To overcome this, a soft SW is provided to change the modem setting to allow for remote reception.

- If this soft SW is set to "1", other telephone sets may be adversely affected.

SW-F1 No. 5 ~ No. 8 Remote operation code figures by external TEL

Remote operation codes can be changes from 0 through 9. If set to greater than 9, it defaults to 9. The "5 ⚹ ⚹ " is not changed.

Ex-7 ⚹ ⚹ (Default: 5 ⚹ ⚹)

SW-F2 No. 1 CNG signal detection in standby condition

When setting to "1", the CNG signal detection function during standby stops.

SW-F2 No. 2, No. 3 Number of CNG signal detection (AM)

Used for detection of CNG in 1 to 4 pulses.

SW-F2 No. 4, No. 5 Number of CNG signal detection (STAND-BY mode)

Used for detection of CNG in 1 to 4 pulses.

SW-F2 No. 6 ~ No. 8 Reserved

Set to "0".

SW-G1 No. 1 ~ No. 4 Quiet detect time (Used in answering machine mode)

When an answering machine is connected, if a no sound state is detected for a certain period of time, the machine judges it as a transmission from a facsimile machine and automatically switches to the FAX mode.

SW-G1 No. 5 ~ No. 8 Quiet detect start timing (Used in answering machine mode)

Inserts a pause before commencing quiet detection.

SW-G2 No. 1 ~ No. 8 Off hook hold

Used to set Off hook hold time by binary input.
(0 to 255 seconds)

SW-G3 No. 1, No. 2 OGM detect timer

AM mode is working after detecting the OGM of answering machine in IRISH setting.
This is used to change the time for detection of the OGM or cancel to detect the OGM.

SW-G3 No. 3, No. 4 Reserved

Set to "0".

SW-G3 No. 5, No. 6 Section time of quiet detection.

The switch which sets the time from the start of detection function to the end of the function.

SW-G3 No. 7, No. 8 Reserved

Set to "0".

SW-H1 No. 1 Busy tone detection ON/OFF time (Lower limit).

The initial value of detection is set according to electric condition.
The set value is changed according to the local switch board. (Erroneous detection of sound is reduced.)
Normally the upper limit is set to 750 msec, and the lower limit to 200 msec.
If erroneous detection is caused by sound, etc.. adjust the detection range.
The lower limit can be set in the range of 350 msec to 200 msec.

SW-H1 No. 2 Busy tone detection ON/OFF time (Upper limit).

Similarly to SW-H1 No. 1, the set value can be varied.
The upper limit can be set in the range of 650 msec to 900 msec.

SW-H1 No. 1	SW-H1 No. 2	Detection range
0	0	200 msec - 900 msec
0	1	200 msec - 650 msec
1	0	350 msec - 750 msec
1	1	350 msec - 650 msec

SW-H1 No. 3 Reserved

Set to "0".

SW-H1 No. 4 Busy tone continuous sound detect time

Set detecting time busy tone for 5 seconds or 10 seconds.

SW-H1 No. 5 Reserved

Set to "0".

SW-H1 No. 6 Busy tone detect continuation sound detect

Used to select detection of the continuous sound of certain frequency.

SW-H1 No. 7 Reserved

Set to "0".

SW-H1 No. 8 Busy tone detect intermittent sound detect

Used to select detection of the intermittent sound of certain frequency.

SW-H2 No. 1, No. 2 Number of Busy tone pulses

Used to set detection of Busy tone intermittent sounds.

SW-H2 No. 3 Fax switching when A.M. full or PC failure

If the answering machine's memory (tape) is full and there is no response, the machine automatically switches to Fax reception.

SW-H2 No. 4 ~ No. 8 Reserved

Set to "0".

SW-I1 No. 1 ~ No. 7 Reserved

Set to "0".

SW-I1 No. 8 CPC signal detection

Used to turn ON/OFF the CPC (Calling Party Control) signal detection in the TEL/FAX automatic switching mode.

SW-I2 No. 1 ~ No. 5 Reserved

Set to "0".

SW-I2 No. 6, No. 7 CPC detection time

Used to set the CPC (Calling Party Control) signal detect time.

SW-I2 No. 8 Reserved

Set to "0".

SW-I3 No. 1 ~ No. 8 Reserved

Set to "0".

SW-I4 No. 1 ~ No. 8 Reserved

Set to "0".

SW-I5 No. 1 ~ No. 8 Reserved

Set to "0".

SW-I6 No. 1 ~ No. 8 Reserved

Set to "0".

SW-I7 No. 1 ~ No. 8 Reserved

Set to "0".

SW-J1 No. 1, No. 2 Reserved

Set to "0".

SW-J1 No. 3 Sender's phone number registration

Used to make a choice of whether the registered sender's phone number can be changed or not. If the switch is set to "1", new registration of the sender's phone number is disabled to prevent accidental wrong input.

SW-J1 No. 4 Country setting

Used to select UK or IRELAND use.

SW-J1 No. 5 Reserved

Set to "0".

SW-J1 No. 6 Summer time setting

Used to set YES/NO of automatic clock adjustment for European Summer time.

SW-J1 No. 7, No. 8 Ringer volume

Used to adjust ringing volume.

SW-J2 No. 1, No. 2 Reserved

Set to "0".

SW-J2 No. 3 Polling function

If this switch is set to 1, the last of Rapid key works as polling key.

SW-J2 No. 4, No. 5 Reserved

Set to "0".

SW-J2 No. 6 ~ No. 8 Speaker Volume (For H, A)

Used to adjust sound volume from a speaker.

SW-J3 No. 1, No. 2 Reserved

Set to "0".

SW-J3 No. 3, No. 4 Transaction report (Communication result printout)

It is possible to obtain transaction results after each communication.

Normally, the switch is set (No. 1: 0, No. 2: 0) so that the transaction report is produced only when a communication error is encountered.

If No. 1 was set to "1" and No. 2 to "0", the transaction report will be produced every time a communication is done, even if the communication was successful.

Setting No. 1 to 1 and No. 2 to 1 will disable this function. No transaction report printed.

SW-J3 No. 5 ~ No. 8 Reserved

Set to "0".

SW-K1 No. 1 Entering DIAG mode by pressing SPEED key

A bit which is used in the production process only. When the SPEED key pressed, the switch is changed from the stand-by state to the DIAG mode.

SW-K1 No. 2 ~ No. 8 Reserved

Set to "0".

SW-L1 No. 1 ~ No. 8 Reserved

Set to "0".

SW-L2 No. 1 ~ No. 8 Reserved

Set to "0".

Caution

When the value which the user is not allowed to set using the soft SW is set, output to the indication or list is not performed. However, the actual operation is performed at the set value.
(Example) Number of rings for auto receive SWD1 No. 1-No. 4

| 0100 | $\rightarrow$ | 1111 | Display" ENTER (1-5)(4) | List | 4RINGS |
| (4times) | | (15times) | | | |

Set value

The operation is performed 15 times.

Value when shipping   Value when shipping
[3] Troubleshooting

Refer to the following actions to troubleshoot any of problems mentioned in 1-4.

[1]   A communication error occurs.

[2]   Image distortion produced.

[3]   Unable to do overseas communication.

[4]   Communication speed slow due to FALLBACK.

- Increase the transmission level SOFT SWITCH A2-5, 6, 7, 8.
  May be used in case [1] [2] [3].

- Decrease the transmission level SOFT SWITCH A2-5, 6, 7, 8.
  May be used in case [3].

- Apply line equalization SOFT SWITCH A1-1.
  May be used in case [1] [2] [3] [4].

- Slow down the transmission speed SOFT SWITCH A1-4, 5.
  May be used in case [2] [3].

- Replace the TEL/LIU PWB.
  May be used in all cases.

- Replace the control PWB.
  May be used in all cases.

*   If transmission problems still exist on the machine, use the following format and check the related matters.

* Please complete this report before calling the "TAC" hotline if problem still occurs.

[4] Error code table

G3 Transmission

Code	Final received signal	Error Condition (Receiver side)
0	Incomplete signal frame	Cannot recognize bit stream after flag
1	NSF, DIS	Cannot recognize DCS signal Cannot recognize NSS signal
2	CFR	Disconnects line during reception
3	FTT	Disconnects line by fallback
4	MCF	Disconnects line during reception of multi-page Cannot recognize NSS, DCS signal in the case of mode change
5	PIP or PIN	No response in receiver side to picture signal after no response in transmitter side to receive TALK mode request
6	RTN or RTP	Cannot recognize NSS, DCS signal after transmitting RTN or RTP signal.
7	No signal or DCN	No response in receiver side or DCN signal received*

G3 Reception

Code	Final received signal	Error Condition (Transmitter side)
0	Imcomplete signal frame	Cannot recognize bit stream after flag
1	NSS, DCS	Cannot recognize CFR or FTT signal Disconnects line during transmission
2	NSC, DTC	Cannot recognize NSS signal
3	EOP	Cannot recognize MCF, PIP, PIN, RTN, RTP signal
4	EOM	Cannot recognize MCF, PIP, PIN, RTN, RTP signal in the case of mode change
5	MPS	Cannot recognize MCF, PIP, PIN, RTN, RTP signal in the case of multi-page
6	PR1-Q	Cannot recognize PIP, PIN signal in the case of TALK request
7	No signal or DCN	No response in transmitter (cannot recognize DIS signal) or DCN signal received*

CHAPTER 3. MECHANISM BLOCKS

[1] General description

1. Document feed block and diagram
Fig. 1

2. Document feed operation

1) The document placed in the hopper actuates the document sensor. After one second, the pulse motor starts to drive the paper feed roller. The document is automatically taken up into the machine, and stopped at the document sensor.

2) When a specified number of pulses are received from the document sensor after the document lead edge is sensed, scanning is started.

3) When a specified number of pulses are received from the document sensor after the document rear edge is sensed, scanning is terminated and the document is fed through.

4) If the document sensor is active (i.e., another document is in the hopper), when the preceding document scanning is completed and it is fed out, the next document is taken up into the machine. If the document sensor is not active (i.e., there is no document in the hopper), when the document is fed out, the operation is terminated.

3. Hopper mechanism

3-1. General view
Fig. 2

The hopper is used to align documents with the document guides adjusted to the paper width.

NOTE: Adjust the document guides before and after inserting the document.

3-2. Automatic document feed

1) Use of the paper feed roller and separation rubber plate ensures error-free transport and separation of documents. The plate spring presses the document to the paper feed roller to assure smooth feeding of the document.

2) Document separation method: Separation rubber plate
Fig. 3

3-3. Documents applicable for automatic feed

	4x6 series (788mm x 1091mm x 1000mm sheets)		Square meter series	
	Minimum	Maximum	Minimum	Maximum
Feeder capacity	20 sheets, max.			
Paper weight	45kg	64.3kg	$52g/m^2$	$74.3g/m^2$
Paper thickness (ref.)	0.06mm	0.09mm	0.06mm	0.09mm
Paper size	B6 (128mm x 182mm) ~ A4 (210mm x 297mm), Letter (216mm x 279mm)			
Feeder capacity	10 sheets, max.			
Paper weight	45kg	90kg	$52g/m^2$	$104g/m^2$
Paper thickness (ref.)	0.06mm	0.12mm	0.06mm	0.12mm
Paper size	B6 (128mm x 182mm) ~ A4 (210mm x 297mm), Letter (216mm x 279mm)			
Paper quality	High quality paper or equivalent			

NOTE: Double-side coated documents and documents on facsimile recording paper should be inserted manually. The document feed quantity may be changed according to the document thickness.

Documents corresponding to a paper weight heavier than 64.3kg ($74.3g/m^2$) and lighter than 135kg ($157g/m^2$) are acceptable for manual feed.

Documents heavier than 135kg in terms of the paper weight must be duplicated on a copier to make it operative in the facsimile.

3-4. Loading the documents

1) Make sure that the documents are of suitable size and thickness, and free from creases, folds, curls, wet glue, wet ink, clips, staples and pins.

2) Place documents face down in the hopper.

   i) Adjust the document guides to the document size.

   ii) Align the top edge of documents and gently place them into the hopper. The first page under the stack will be taken up by the feed roller to get ready for transmission.

NOTES: 1) Curled edge of documents, if any, must be straighten out.

2) Do not load the documents of different sizes and/or thicknesses together.

Back of document

Last page of document

Separation rubber plate

Paper feed spring

First page of document

Paper feed roller
Fig. 4

3-5. Documents requiring use of document carrier

1) Documents smaller than B6 (128mm x 182mm).

2) Documents thinner than the thickness of 0.06mm.

3) Documents containing creases, folds, or curls, especially those whose surface is curled (maximum allowable curl is 5mm).

4) Documents containing tears.

5) Carbon-backed documents. (Insert a white sheet of paper between the carbon back and the document carrier to avoid transfer of carbon to the carrier.)

6) Documents containing an easily separable writing material (e.g., those written with a lead pencil).

7) Transparent documents.

8) Folded or glued documents.

Document in document carrier should be inserted manually into the feeder.

4. Document release

4-1. Cross section view

(RIGHT SIDE)

Document guide ass'y

Paper cover

Lower cabinet
Fig. 5

4-2. General

When the release lever is pulled by hand in the direction of arrow A, the latch is released and the upper document guide moves on its axis in the direction of the arrow. The feed rollers, the separation rubber plate, and the pinch rollers become free to make it possible to remove the document.

5. Optical system

(1) General view

Document

CCD

CCD PWB

LED Lamp

Glass

Rens

Mirror 2
Mirror 1

Mirror 3

Fig. 6

(2) Composition

The optical system is composed of the document feed mechanism, the lamp, the reflecting mirrors, the focusing lens, the CCD sensor, and the read process circuit.

5-1. LED Lamp

The LED lamp is used to expose the document.

5-2. Lens

The lens is used to focus the light reflected from the document on the CCD elements.

5-3. CCD

The CCD (charge coupled device) image sensor consists of a photodiode array which converts the intensity of light reflected from the document surface into series of analog voltages which are then stored in an analog shift register. The series of analog voltages are then converted into a digital equivalent by a black/white binary logic circuit.

(Example) Scan signal output waveform

Peak

100%

40% minimum

Maximum document width, 216mm

Scan line length
Fig. 7

1) The minimum output from the CCD at the maximum scan width of document (216mm) must be more than 40% of the peak value.

2) The peak output must be about 200mV under room temperature to avoid CCD saturation.

6. Recording block

(1) General view

Praten roller

Cutter unit

Thermal head
Recording paper

Fig. 8

6-1. Driving

Via the pulse motor gear shaft, the reduction gear, and the recording paper feed gear, rotation of the pulse motor is conveyed to the recording paper feed roller to feed the recording paper.

6-2. Recording

Use of a thermal head permits easier maintenance and low operating costs.

1) Thermal head

The thermal head consists of 1728-dot heat elements arranged in a single row and has the resolution of 8 dots/mm. The maximum recording speed is 10ms/line. The thermal head also incorporates a 1728-dot shift register latch and an output control driver circuit. Low power consumption is achieved by dividing the head into nine segments.

2) Structure of the recording mechanism

Recording is accomplished by pressing the thermal head on the recording paper against the platen roller.

The main scan (horizontal) is electronically achieved, while the sub-scan (vertical) is achieved by moving the recording paper by the recording platen roller.

Usually, the cause for uneven print tone is caused by misalignment of the thermal head or uneven contact with the roller.

It can be checked in the following manner.

1) Check if the thermal head power and signal cables are properly routed.

2) Check that the thermal head pivot moves smoothly up and down.

3) Check that the thermal head support bracket is secured without any play.

4) Check to see that the recording platen roller has proper concentricity, in the case of a print tone variation evenly repeated down the page.

5) Replace the thermal head with a new one and check to see if the same trouble occurs.

Jamming releasing method

The method to release the cutter-provided mode) is explained.

> ① During ordinary operation, cutting becomes impossible be-
> cause of plural sheet feed or similar.
>
> ② After the error sound, "CUTTER RESETTING" is displayed.
>
> ③ Try automatic cutting.
>
> ④ "PAPER JAM" is displayed whether cutting is possible or not.

Cutting is possible.

> ⑤ Open the cover of the recording paper, and remove the
> jammed, chipped or similar paper.
>
> ⑥ Reset the recording paper, and close the cover of the record-
> ing paper.
>
> ⑦ It stands by.

Cutting is impossible.

> ⑤ Open the cover of the recording paper, and remove the
> jammed, chipped or similar paper.
>
> ⑥ Press the start or stop key.
>
> ⑦ Reset the machine (Same as in Item ③.)
>
> ⑧ Remove the chipped paper.
>
> ⑨ Reset the recording paper, and close the cover of the record-
> ing paper.
>
> ⑩ It stands by.

Cutting is impossible even after jamming is released.

> ⑪ Insert the wooden rod or similar (example: pencil) through
> the paper discharge port, move the moving blade upward
> and remove the jammed paper.
> Note: Don't insert any metallic rod.
>   (See the appended drawing.)

[2] Disassembly and assembly procedures

- This chapter mainly describes the disassembly procedures. For the assembly procedures, reverse the disassembly procedures.

- Easy and simple disassembly/assembly procedures of some parts and units are omitted. For disassembly and assembly of such parts and units, refer to the Parts List.

- The numbers in the illustration, the parts list and the flowchart in a same section are common to each other.

- To assure reliability of the product, the disassembly and the assembly procedures should be performed carefully and deliberately.

1	Recording paper cover unit

a. Remove the recording paper cover unit, the mechanism unit according to the flowchart.

Parts list (Fig. 1)

No.	Part name	Q'ty	No.	Part name	Q'ty
1	Mechanism unit	1	16	Hopper guide, right	1
2	Screw (M3×10)	2	17	Recording paper cover	1
3	Rear cover	1	18	Screw (M3×10)	1

CHAPTER 5. CIRCUIT DESCRIPTION

[1] Circuit description

1. General description

The compact design of the control PWB is obtained by using ROCK-WELL fax engine in the main control section and high density printing of surface mounting parts. Each PWB is independent according to its function as shown in Fig. 1.

2. PWB configuration
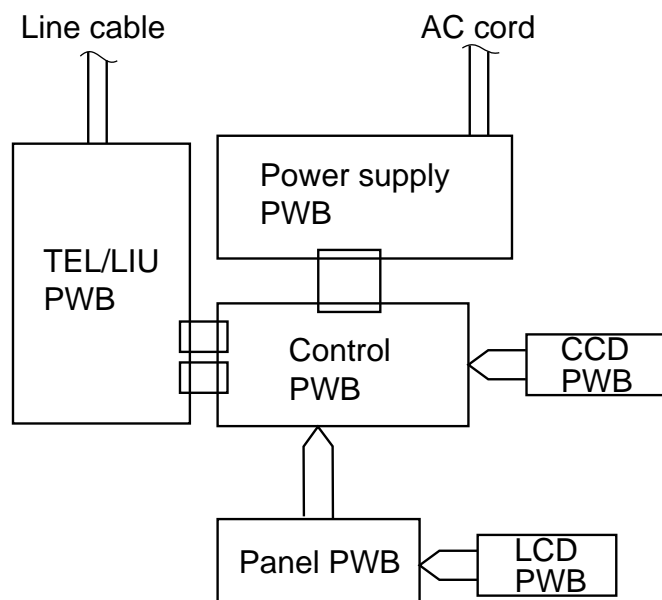

Fig. 1

1) Control PWB

The control PWB controls peripheral PWBs, mechanical parts, transmission, and performs overall control of the unit.

This machine employs a 1-chip modem (R96DFXL-CID) which is installed on the control PWB.

2) TEL/LIU PWB

This PWB controls connection of the telephone line to the unit.

3) Power supply PWB

This PWB provides voltages of +5V, and +24V to the another PWB.

4) Panel PWB

The panel PWB allows input of the operation keys.

5) CCD PWB

This PWB controls the pickup optical device.

6) LCD PWB

This PWB controls the LCD display.

3. Operational description

Operational descriptions are given below:

- Transmission operation

When a document is loaded in standby mode, the state of the document sensor is sensed via the 1 chip fax engine (SFE-LC). If the sensor signal was on, the motor is started to bring the document into the standby position. With depression of the START key in the off-hook state, transmission takes place.

Then, the procedure is sent out from the modem and the motor is rotated to move the document down to the scan line. In the scan processor, the signal scanned by the CCD is sent to the internal image processor and the AD converter to convert the analog signal into binary data. This binary data is transferred from the scan processor to the image buffer within the RAM and encoded and stored in the transmit buffer of the RAM. The data is then converted from parallel to serial form by the modem where the serial data is modulated and sent into the line.

- Receive operation

There are two ways of starting reception, manual and automatic. Depression of the START key in the off-hook mode in the case of manual receive mode, or CI signal detection by the LIU in the automatic receive mode.

First, the SFE-LC controls the procedure signals from the modem to be ready to receive data. When the program goes into phase C, the serial data from the modem is converted to parallel form in the modem interface of the 1 chip fax engine (SFE-LC) which is stored in the receive buffer of the RAM. The data in the receive buffer is decoded software-wise to reproduce it as binary image data in the image buffer. The data is DMA transferred to the recording processor within the SFE-LC which is then converted from parallel to serial form to be sent to the thermal head. The data is printed line by line by the SFE-LC which is assigned to control the motor rotation and strobe signal.

- Copy operation

To make a copy on this facsimile, the COPY key is pressed when the machine is in stand-by with a document on the document table and the telephone set is in the on-hook state.

First, depression of the COPY key advances the document to the scan line. Similar to the transmitting operation, the image signal from the CCD is converted to a binary signal in the DMA mode via the 1 chip fax engine (SFE-LC) which is then sent to the image buffer of the RAM. Next, the data is transferred to the recording processor in the DMA mode to send the image data to the thermal head which is printed line by line. The copying takes place as the operation is repeated.

[2] Circuit description of control PWB

1. General description

Fig. 2 shows the functional blocks of the control PWB, which is composed of 4 blocks.
MAIN CONTROL BLOCK

Fig. 2 Control PWB functional block diagram

2. Description of each block

(1) Main control block

The main control block is composed of ROCKWELL 1 chip fax engine (SFE-LC), ROM (128KByte), RAM (32KByte) and Modem (R96DFXL-CID). Devices are connected to the bus to control the whole unit.

1) SFE-LC (IC8) : pin-144 QFP (SFE-LC)

2) R96DFXL (IC5) : pin-100 QFP (MODEM)

The FAXENGINE Integrated Facsimile Controllers.

SFE-LC, contains an internal 8 bit microprocessor with an external 2 Mbyte address space and dedicated circuitry optimized for facsimile image processing and facsimile machine control and monitoring.

3) 27C1000 (IC1): pin-32 DIP (ROM)

1 time ROM of 1Mbit equipped with software for the main CPU.

4) M5M5255CFP-70LL (IC3): pin-28 SOP (RAM)

Line memory for the main CPU system RAM area and coding/decoding process. Used as the transmission buffer.

Memory of recorded data such as daily report and auto dials. When the power is turned off, this memory is backed up by the lithium battery.
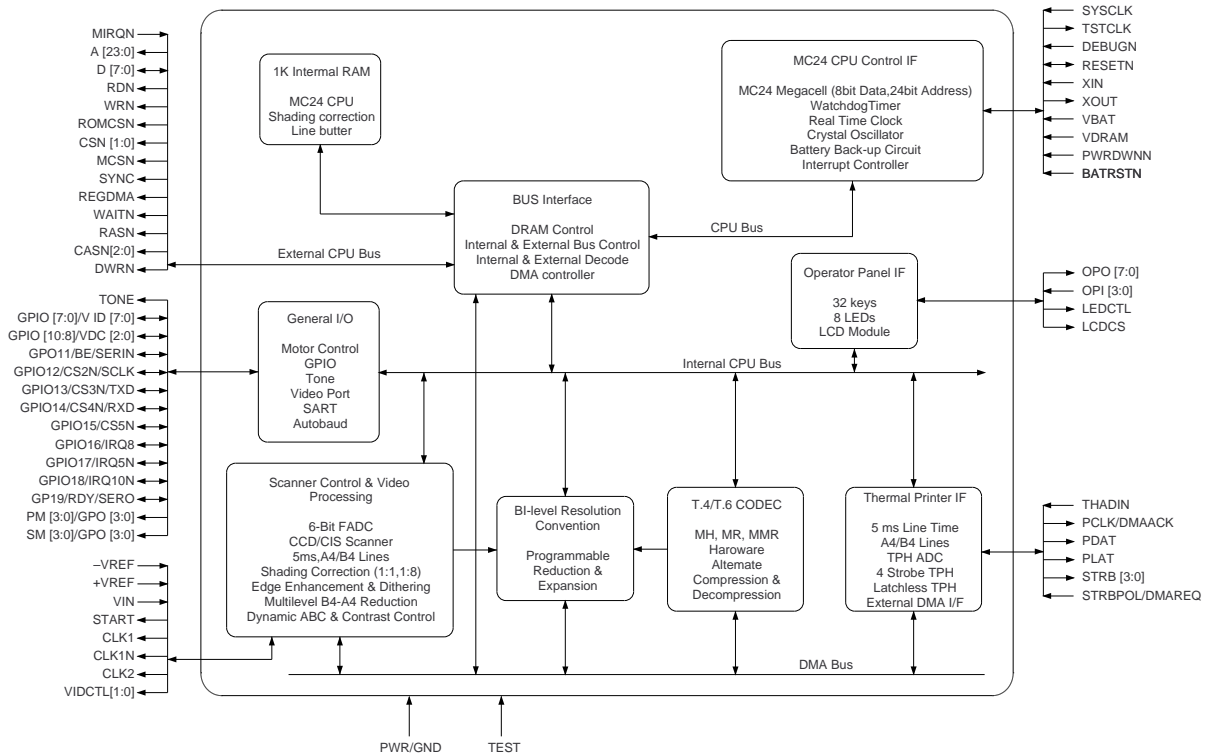

Fig. 3

SFE-LC (IC8) terminal descriptions

Pin Name	Pin No.	I/O	Input Type	Output Type	Pin Description (Active low signals have an "n" pin name ending.)
CPU Control Interface					
MIRQn	135	I	HU	–	Modem interrupt. (Hysteresis In, Internal Pullup.)
SYSCLK	133	I	H	–	System clock. (Hysteresis In.)
TSTCLK	130	O	–	3XC	Test clock.
Bus Control Interface					
A[19:0]	[5:6][8:13] [15:20][22:27]	O	T	3XT	Address bus (20-bit).
D[7:0]	[136:139] [141:144]	I/O	T	3XT	Data bus (8-bit).
RDn	128	O	–	3XTT	Read strobe.

(4) Modem (R96DFXL) block

INTRODUCTION

The Rockwell R96DFXL MONOFAX modem is a synchronous 9600 bits per second (bps) half-duplex modem with error detection and DTMF reception. It has low power consumption and requires only a single +5V DC power supply. The modem is housed in a single VLSI device package.

The modem can operate over the public switched telephone network (PSTN) through line terminations provided by a data access arrangement (DAA).

The R96SHF is designed for use in Group 3 facsimile machines. The modem satisfies the requirements specified in CCITT recommendations V.29, V.27 ter, V.21 Channel 2 and T.4, and meets the binary signaling requirements of T.30.

The modem can operate at 9600, 7200, 4800, 2400, or 300 bps, and also includes the V.27 ter short training sequence option.

The modem can also perform HDLC framing according to T.30 at 9600, 7200, 4800, 2400, or 300 bps.

The modem features a programmable DTMF receiver and three programmable tone detectors which operate concurrently with the V.21 channel 2 receiver.

The voice mode allows the host computer to efficiently transmit and receive audio signals and messages.

The modem is available in either a 100-pin plastic quad flat pack (PQFP) or a 64-pin quad in-line package (QUIP).

General purpose input/output (GPIO) pins are available for host assignment in the 100-pin PQFP.

The modem's small size, single voltage supply, and low power consumption allow the design of compact system enclosures for use in both office and home environments.

MONOFAX is a registered trademark of Rockwell International.

FEATURES

- Group 3 facsimile transmission/reception
  - CCITT V.29, V.27 ter, T.30, V.21 Channel 2, T.4
  - HDLC Framing at all speeds
- V.27 ter short train
- Concurrent DTMF, FSK, and tone reception
- Voice mode transmission/reception
- Half-duplex (2-wire)
- Caller ID reception (V.23 receive-1200 bps)
- Programmable maximum transmit level:
    0 dBm to −15 dBm
- Programmable transmit analog attenuation:
    0 dB to 14 dB in 2 dB steps
- Receive dynamic range: 0 dBm to −43 dBm
- Programmable dual tone generation
- Programmable tone detection
- Programmable turn-on and turn-off thresholds
- Programmable interface memory interrupt
- Diagnostic capability
  - Allows telephone line quality monitoring
- Equalization
  - Automatic adaptive equalizer
  - Fixed digital compromise equalizer
- DTE interface: two alternate ports
  - Selectable microprocessor bus (6500 or 8085)
  - CCITT V.24 (EIA-232-D compatible) interface
- TTL and CMOS compatible
- Low power consumption: 275 mW (typical)
- Single Package
  - 100-pin PQFP
  - 64-pin QUIP
- Single +5VDC power supply
- Software compatible with R96MFX, R96EFX, R96SHF, and R96VFX modems

Notes:

1. NC = No connection; leave pin disconnected (open).
2. I/O Type: Digital signals: see Table 9;
   Analog signals: see Table 10.
3. R = Required modem inter-connection; no connection to host equipment.

[3] Circuit Description of TEL/LIU PWB

(1) TEL/LIU block operational description

1) Block diagram
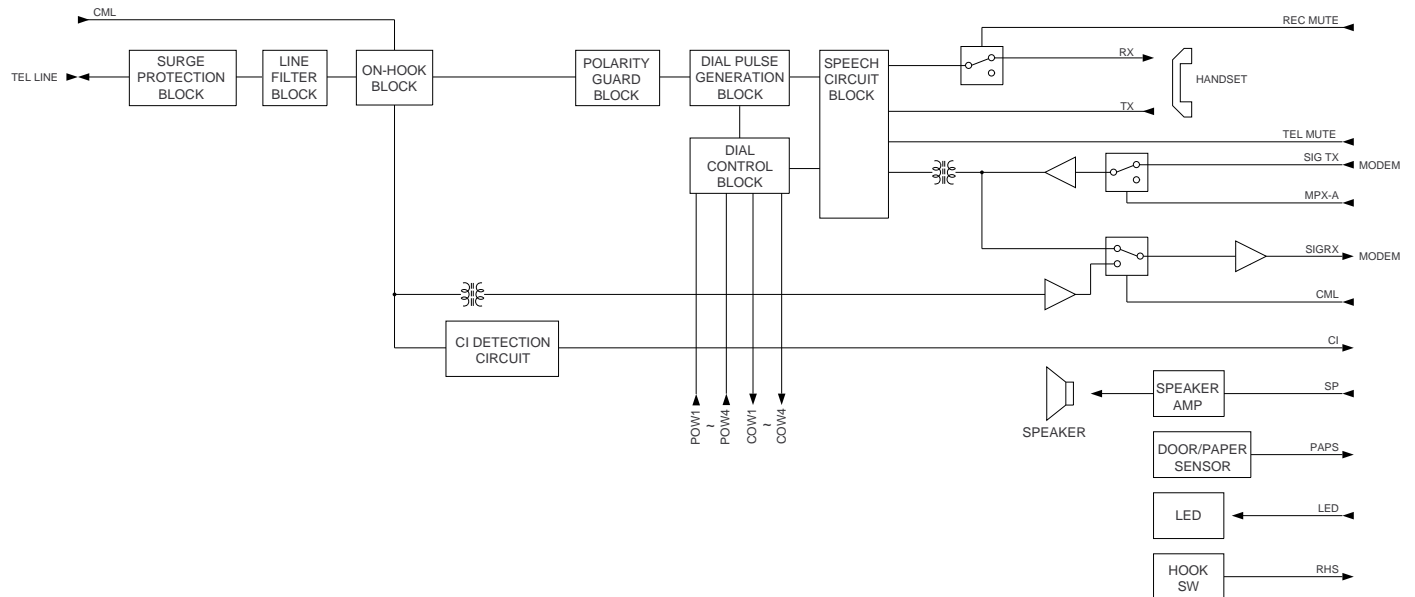

2) Circuit description

The TEL/LIU PWB is composed of the following 12 blocks.

1. Line filter block
2. CI block
3. Polarity guard block
4. Dial control block
5. Pulse transmitting block
6. ON-hook block
7. Hook detection block
8. Communication circuit block
9. Speaker amplifier block
10. Power supply
11. Sensor block
12. Signal selection

3) Block description

1. Line filter block

This block is composed of a (L1) and is used to remove noise from the telephone line.

2. CI block

This block is composed of a photo coupler (PC3) and is used to convert ringer signal into a digital signal.

3. Polarity guard block

This block is composed of diode bridge (REC1) and is used to supply a current and voltage of the same polarity to the telephone circuit regardless of reversion of polarity in the telephone circuit.

4. Dial control block

This block is composed of dialer IC (IC105) and crystal oscillator (×1). The dialer IC is controlled with 4-bit data from operation panel when the power is switched off. There is not used the dialer IC, when the power is switched on.

5. Pulse transmitting block

This block is composed of transistor (Q1), photo coupler (PC5) and zener diode. Dial pulses supplied from CPU are amplified by transistor (Q1) through a photo coupler (PC4) to the telephone line.

6. ON-hook block

This block is composed of CML relay (CML), and CML is for connection of the telephone line.

7. Hook detection block

This block is composed of hook switch (SW1), and is used to detect on/off of the hook switch and to inform CPU of connection/open of the telephone line.

8. Communication circuit block

This block is composed of the speech IC (IC1), and is equipped with 2-line/4-line select circuit, auto pad circuit, and all other circuit.

9. Speaker amplifier block

This block is composed of the speech amplifier IC (IC101), and is used to amplify voice signal in monitoring or in speaker reception with the amplifier IC and to supply to the speaker.

10. Power supply

+24V and +5V are supplied from the control unit through the connector CNLIUA-1~3.

11. Sensor block

This block is composed of PSNS (PE1), and is used to sense the presence of recording paper and the cover open/close of the cover.

12. Signal selection

The following signals are used to control the transmission line of TEL/FAX signal.

- TEL MUTE : Controls the mute of handset voice transmission signal.

- REC MUTE: Controls the mute of handset voice reception signal.

- SP-MUTE: Controls the mute of speaker amplifier.

- MPX A: Mutes the transmission drive amplifier.

  H: Selected when the FAX signal is being received

  L: Selected when the telephone is being used or when the FAX signal is being transmitted

Signal flow when TEL speaking
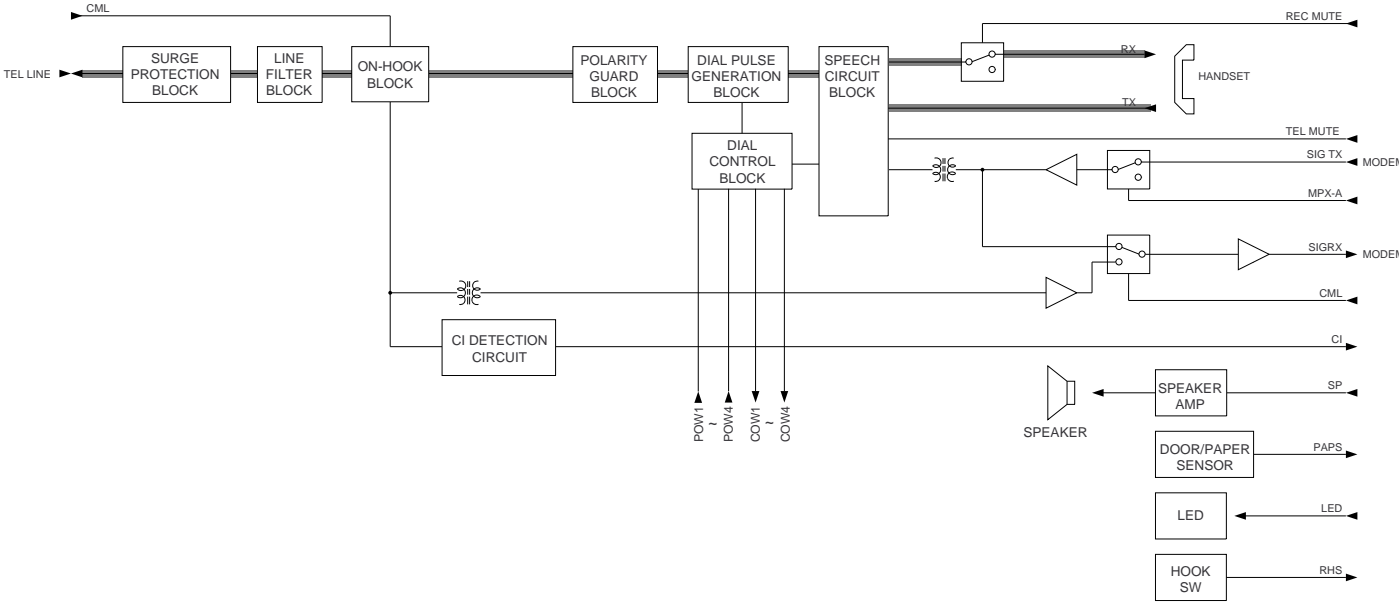

[4] Circuit description of power supply PWB

1. Block diagram
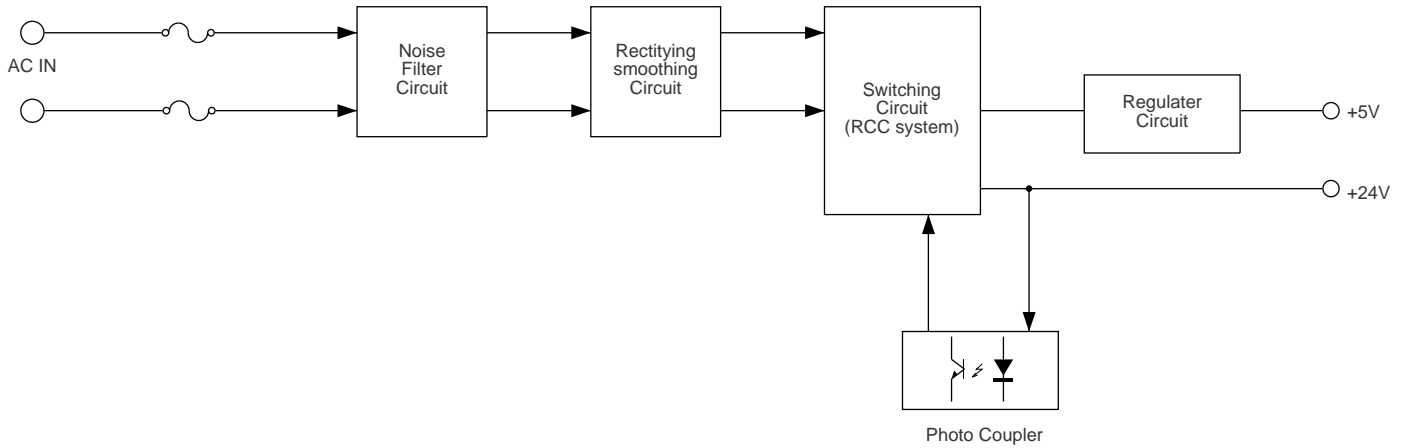

Fig. 8

2-1. Noise filter circuit

The input noise filter section is composed of L and C, which reduces normal mode noise from the AC line and common mode noise to the AC line.

2-2. Rectifying/smoothing circuit

The AC input voltage is rectified by diode D1, D2, D3, D4 and smoothed by capacitor C5 to supply DC voltage to the switching circuit section.

Power thermistor TH1 suppresses inrush current at power switch-on.

2-3. Switching circuit

This circuit employs the self excited ringing choke convertor (RCC) system. In this system, the DC voltage supplied from the rectifying/smoothing section is converted into high frequency pulses by ON/OFF repetition of MOS FET Q1.

Energy is charged in the primary winding of T1 during ON period of Q1, and discharged to the secondary winding during OFF period.

The output voltage is controlled by adjusting ON period of Q1 which changes charge time of C9 through operation of photo-coupler PC1 from 24V output.

The overcurrent protection is performed by bringing Q1 to OFF state through detection of voltage increase in the auxiliary winding of T1 by ZD2 and R9.

The overvoltage protection is performed by operating the overcurrent protection circuit through destruction of zener diode ZD4 and short-circuiting of load.

2-4. +5V circuit

Each DC voltage supplied by rectifying the output of transformer T1 with diode D8 is stabilized by 3-terminal regulator IC1.

2-5. Fuse (F1, F3)

Be sure to use the following fuses.

Maker: LITTELE

Type: 2151.25 ME 600

Rating: T1.25 AH 250V

Sharp code: 0 CBPJCTY 1251/

[5] Circuit description of CCD PWB

The CCD board picks up optical information from the document, converts it into an electrical (analog) signal and transfers it to the control boad.

(1) Block diagram
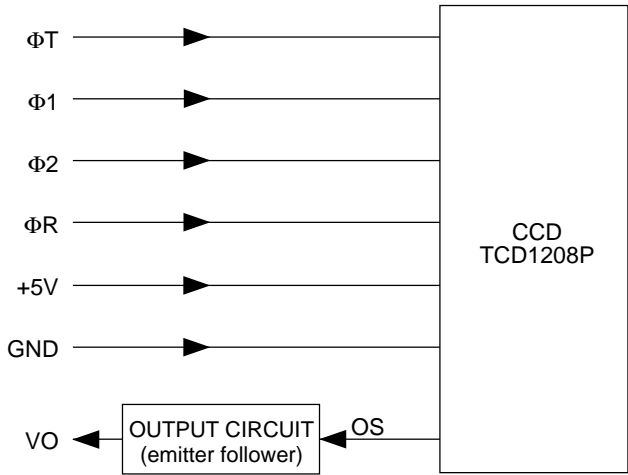

Fig. 8

(2) Description of blocks

1. CCD

The TCD1208P is a highly sensitive charged coupled image sensor that consists of 2160 picture elements.

Receiving four drive signal (ϕT, ϕ2, ϕ1, ϕR) from the control board, the tranferred photoelectric analog signal OS is impedance converted, and the signal VO, is supplied to the control board.

2. Waveforms

1. ϕ1, ϕ2 (=$\overline{\phi 1}$) signals within the control board.

2. OS ϕ

2. Description

2-1. Extension board unit

1. Remove the TEL/LIU PWB, control PWB and Power Supply PWB from this unit, and mount the extension board unit instead.

   • Before connecting the wiring to the extension board unit, set the test PWB switches to the fixed position.

2. The setting is as follows.
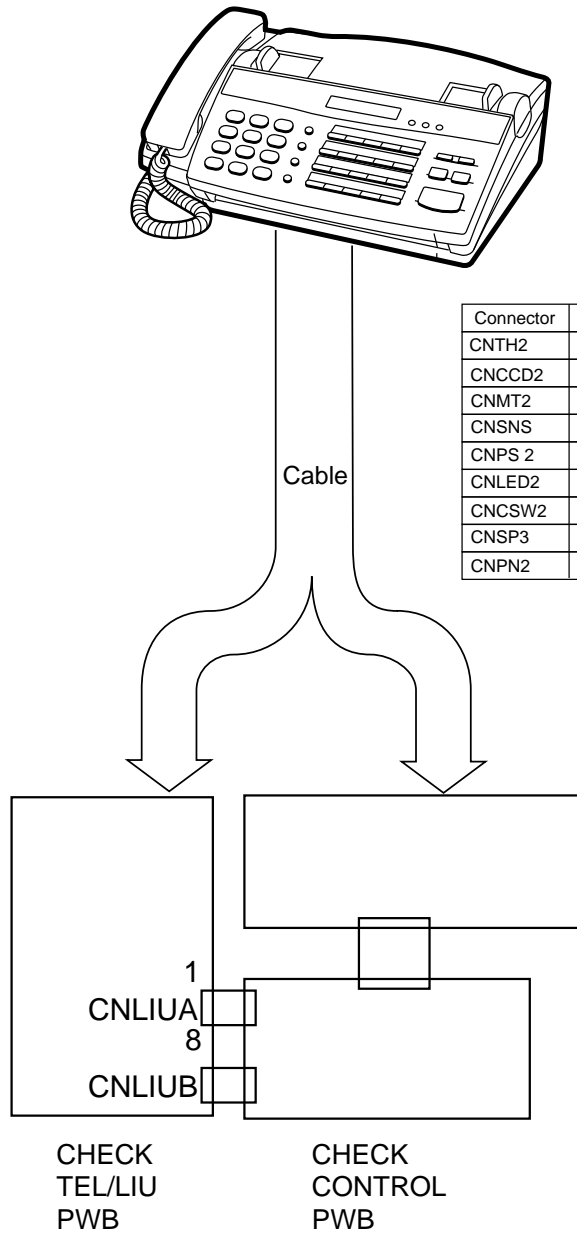

A set with a mounted extension board unit

Recording paper sensor	ON	ON/OFF operation
Hook SW	ON	ON/OFF operation

2-2. Scan optical system adjustment

(1) Outline

The adjustment procedures of the scan optical system are described below:

(2) Adjustment procedures

① Switch off the machine and disconnect the AC power cable from the wall socket.

② Fully open the upper cabinet, remove the fixing screws of the recording paper tray and remove the recording paper tray. In order to perform a focus adjustment, remove the optical system unit from the frame.

③ Disconnect the main pwb from the TEL/LIU pwb.

④ Connect your oscilloscope channel 1 to the VIN signal and channel 2 of your oscilloscope to ϕT signal (Refer Pin 4 of connector CNCCD on the main pwb). Connect the earth clips of either probe to AG ground as shown. Set the trigger to channel 2.

CNCCD

VIN
D101
VID CNCCD-1
ΦT CNCCD-4
VG CNCCD-3

⑤ Re-connect the main pwb to the TEL/LIU pwb and connect these circuit boards to the connectors on the chassis.

⑥ Re-assemble up to and including the recording paper tray to the main chassis and close upper cabinet.

⑦ Plug the AC power cable into the wall outlet and turn the fax machine on.

⑧ Insert a test chart in the document hopper and execute the CCD Adjust Mode diagnostic. Press the START key to enable local copy until approximately one fifth of the page has been copied, then press the STOP key to enable the CPU wait state.

⑨ Fully open the upper cabinet and remove the recording paper tray.

⑩ Install the scan adjustment jig to the optical system unit, so that the pattern surface is on the lower side.

⑪ Fit the pins of the scan adjustment jig to the holes of the optical system frame.

⑫ Lightly loosen the red screws of the CCD pwb and obtain the VID signal waveform in synchronization with ϕT signal waveform. Adjust the CCD pwb positioning to obtain the waveform as shown below.

Scan adjustment jig
